

Connector Assembly Facility Identification for Amphenol® Interconnect Products

L-1294-12

Printed in U.S.A.

Revision January 2021

Purpose:

To identify connectors assembled by authorized Amphenol® assembly locations.

Series Affected:

All Amphenol Interconnect products assembled within the Amphenol Aerospace Operations (AAO) and Amphenol Industrial Operations (AIO) facilities.

Many Amphenol products were formerly known as Bendix® products. These products are now manufactured and sold under the Amphenol® brand name. The name “Amphenol” will replace the name “Bendix” on products in the future.

Connector product lines that were formerly part of Pyle-National have been consolidated into the Amphenol Corporation. The name “Amphenol” or the name “Pyle” will appear on these products.

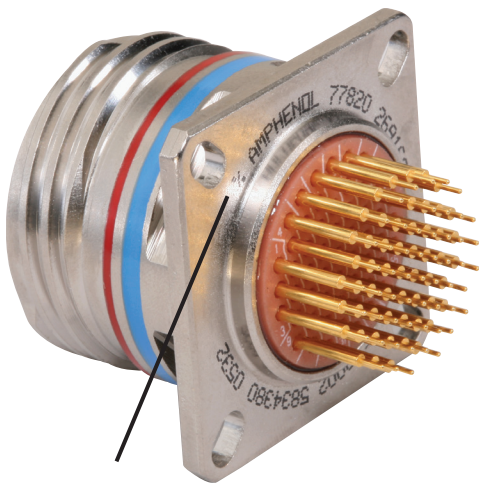

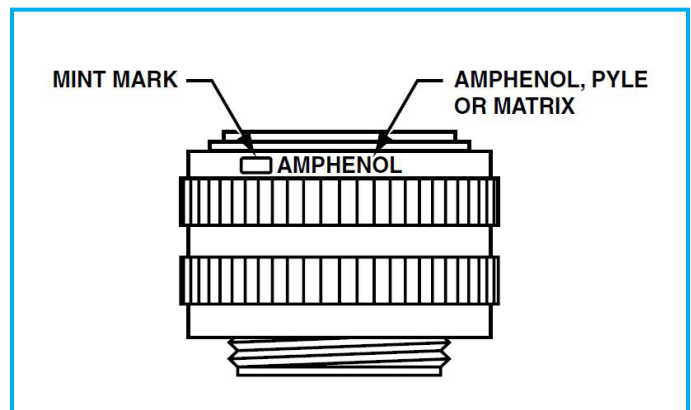

Some connector product lines that were formerly part of Matrix® have been purchased and have been consolidated into the Amphenol Corporation. The name “Amphenol” or the name “Matrix” will appear on these products.

Mint Marks

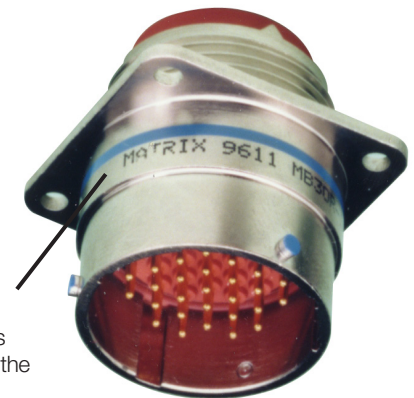

There are many facilities which are authorized to assemble and supply Amphenol® interconnect products in addition to the Amphenol Aerospace and Amphenol Industrial Operations main facility in Sidney, New York. Each of these assembly facilities is assigned a specified symbol (mint mark) identifying the origin of the product they assemble.

The mint mark will be stamped directly ahead of the name “Amphenol” or “Pyle” or “Matrix” on both plug and receptacle connectors. (see illustration at right and connector example photos below)

Connectors assembled by the Amphenol Sidney, NY facility can be identified by the absence of any mint mark symbol.*

Example of an Amphenol Connector with Mint Mark indicating that this connector was assembled at the Amphenol Optimize, Mexico facility. (See this example mint mark shown in listing on page 3).

* Example of an Amphenol/Matrix Connector with no Mint Mark - indicating that this connector was assembled at the Amphenol Sidney, NY facility.
